Hiring Manager
Jack & Jill (Seamflow)
London, England, UK

Dear Hiring Manager,

I am writing to express my interest in the Forward Deployed Engineer position at Seamflow. As an engineer who thrives at the intersection of product development and customer success, the FDE model aligns perfectly with my background in building custom integrations and orchestrating AI workflows. I have spent the last few years embedding myself into operational challenges and translating complex business requirements into scalable, working software.

In my recent role as Lead Developer at FlowSpace.co, I owned the entire product lifecycle from prototype to production. I spearheaded the migration to a modern TypeScript and Next.js architecture, which supported the scaling of our user base from 2,000 to over 4,500 active users. Beyond core engineering, I architected integrations with external APIs and built production AI agents using Claude and n8n to automate the ingestion of multi-format data. This required constantly context-switching between writing robust Python and TypeScript code and collaborating directly with stakeholders to refine business logic and train end-users.

The opportunity to operate as an elite engineering unit at Seamflow, shipping custom solutions in days rather than quarters, is exactly the kind of high-impact environment I am seeking. My experience across the typical FDE stack—including TypeScript, Python, SQL, REST/GraphQL APIs, and LLM orchestration—equips me to hit the ground running. I am adept at communicating technical trade-offs to business audiences and feeding product insights back to core engineering teams, ensuring that custom solutions not only solve immediate customer needs but also enrich the broader product ecosystem.

Additionally, as someone who frequently leverages AI tooling, including Claude Code, to accelerate development cycles, I understand the velocity required to deliver bespoke integrations quickly without compromising on reliability.

I would welcome the opportunity to discuss how my technical skills and client-facing experience can contribute to the success of your customers at Seamflow. Thank you for considering my application.

Sincerely,

Prabhavit Gupta
