Hiring Manager
Jitterbit

Subject: Application for Java Backend Software Engineer

Dear Hiring Manager,

I am writing to express my strong interest in the Java Backend Software Engineer position at Jitterbit. With a background in building robust, cloud-native backend systems and a passion for distributed architectures, I am eager to bring my experience in developing scalable SaaS platforms to your engineering team.

While my recent focus has heavily involved Node.js, TypeScript, and Python environments leveraging Next.js, Docker, and Kubernetes, the core challenges of system design—such as handling concurrency, optimizing API response times, and architecting microservices—remain identical. Although Java (8+) and Spring Boot are not currently in my daily toolkit, my solid foundation in object-oriented principles, coupled with my experience orchestrating multi-agent systems and asynchronous workflows, provides a natural bridge to mastering Java-based ecosystems quickly.

At FlowSpace.co, I successfully architected production-grade microservices and led a live platform migration to a scalable, cloud-native infrastructure, supporting over 4,500 active users. My work involves designing resilient REST APIs and deploying asynchronous data processing pipelines, conceptually aligned with the distributed message-broker architectures and multi-tenant SaaS environments that Jitterbit builds. Moreover, I am deeply familiar with cloud operations, container orchestration (Kubernetes), and maintaining CI/CD pipelines to ensure rapid, secure deployments.

I am particularly drawn to Jitterbit because of your emphasis on quality-first engineering and end-to-end ownership in a remote-friendly culture. I have consistently thrived in autonomous, distributed environments where I can take full ownership of complex subsystems—from initial design through to production support and performance tuning. Using Claude Code and similar AI-assisted development tools, I am able to rapidly adapt to new codebases and paradigms, allowing me to contribute meaningfully from day one while getting up to speed on specific Java frameworks.

Thank you for considering my application. I look forward to the possibility of discussing how my background in scalable architecture and passion for high-performance integrations align with Jitterbit's engineering goals.

Sincerely,
Prabhavit Gupta
