Hiring Manager
Jobgether

Subject: Application for AI Process Forward Deployed Engineer

Dear Hiring Manager,

I am writing to express my strong interest in the AI Process Forward Deployed Engineer position at Jobgether. As a Software Engineer specializing in GenAI and process automation, I have spent my career operating at the intersection of technical architecture and client enablement. I specialize in embedding directly with clients to turn ambiguous business requirements into production-ready, AI-driven workflows.

In my recent freelance consulting work, I have managed the complete deployment lifecycle for enterprise clients, from the initial architectural scoping to building and deploying custom intelligent agents that integrate natively into their environments. Whether I am developing a backend orchestration layer in Python and TypeScript, debugging complex infrastructure limitations on AWS, or leveraging Claude Code to rapidly iterate on AI integration pipelines, my focus is always on delivering durable solutions and accelerating time-to-value.

The forward deployed model perfectly aligns with my strengths. I am equally comfortable diving deep into API integrations and platform configurations as I am communicating technical strategies to non-technical stakeholders. I pride myself on providing the "durable judgment" required to guide clients through complex digital transformations, ensuring that our technical deployments directly solve their core operational challenges.

I am very excited about the opportunity to bring my background in agentic architectures and client-facing engineering to Jobgether, and I am confident in my ability to drive successful customer implementations for your platform.

Thank you for considering my application. I look forward to the possibility of discussing how my skills and experiences align with your team's goals.

Sincerely,

Prabhavit Gupta
