Date: September 30, 2026
Subject: Application for Software Engineer, Backend

Dear Hiring Manager,

I am writing to express my strong interest in the Backend Software Engineer role at KarrotPay. I am deeply inspired by KarrotPay's mission to transform neighborhood commerce by creating a seamless, reliable fintech experience that connects local businesses and users. The opportunity to contribute to a mission-critical platform that powers the daily transactions of millions—whether in the Offline Payment team, Payment Core, or Service Core—perfectly aligns with my passion for building resilient, high-performance distributed systems.

At FlowSpace, I specialized in designing and scaling event-driven architectures capable of handling high-throughput workloads. I built robust data pipelines and orchestrated complex API integrations with strict fault tolerance, implementing rate limiting, webhook retry logic, and asynchronous job processing to ensure system stability. I understand that processing financial transactions requires zero compromise on data consistency and reliability. I have tackled similar challenges in concurrent database optimization and distributed architecture design, ensuring that my systems could gracefully recover from failures without dropping a single event.

While my recent professional experience has centered around Python, Node.js, and PostgreSQL, I am highly adaptable and have a strong foundation in the principles of mission-critical systems. I actively use AI-assisted coding tools like Claude Code to rapidly master new technologies. I am confident in my ability to quickly ramp up in a Kotlin and Spring Boot ecosystem, leveraging my deep understanding of REST, gRPC, distributed data streaming, and AWS infrastructure to deliver immediate value to the KarrotPay team.

I thrive in collaborative, fast-paced environments where engineers take ownership of the entire product lifecycle—from domain modeling to deploying on Kubernetes. I am excited about the prospect of joining a team that values continuous learning and proactive problem-solving.

Thank you for considering my application. I am currently based in Italy but am fully open to relocating to Seoul for this opportunity. I look forward to the possibility of discussing how my background, adaptability, and drive for engineering excellence can contribute to the continued growth of KarrotPay.

Sincerely,

Prabhavit Gupta
