Dear Kinaxis Hiring Team,

As an AI Engineer who recently led the deployment of automated data pipelines and an agentic listing bot for a scaling European marketplace, I am highly interested in the Forward Deployed Engineer I role at Kinaxis. The opportunity to embed directly with enterprise customers and implement Agentic AI workflows on the Maestro platform perfectly aligns with my track record of bridging the gap between ambiguous business needs and shippable production software.

During my tenure as Lead Developer at FlowSpace, I drove a complete live platform migration to a modern stack and integrated AI directly into our core product. My experience maps strongly to the technical and customer-facing demands of the FDE pod structure:

- **Agentic AI Pipelines:** Engineered a production AI listing bot utilizing Claude APIs, TypeScript, and n8n that ingests multi-format unstructured data (PDFs, websites) to draft structured JSON workspace listings, complete with human-in-the-loop review.
- **Complex Data Integration:** Built and managed robust integrations connecting internal systems with third-party webhooks (Nexudus, CRM platforms) into a unified Postgres database layer.
- **Customer-Centric Execution:** Successfully triaged client requirements alongside an external agency to scale our platform capacity from 2,000 to over 4,500 users, taking ownership of full-stack feature delivery from concept to production.

Kinaxis stands out to me because it operates at the exact intersection of robust data backbones and applied AI orchestration. Bringing transformative efficiency to supply chain operations requires more than just clean code; it demands a bias to action and a readiness to dive into the warehouse floor reality. I thrive in this exact kind of cross-disciplinary, startup-minded environment.

I would welcome the opportunity to discuss how my background in fast-paced software deployment and applied LLM workflows can directly accelerate your clients' success on the Maestro Platform. I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
