Hiring Manager
Leena AI
Remote

Dear Hiring Manager,

I am writing to apply for the Forward Deployed Engineer position at Leena AI. With a strong foundation in full-stack development and hands-on experience orchestrating LLMs and agentic workflows into production environments, I am excited by the opportunity to help enterprise clients integrate Leena AI's platform into their core HR and IT operations.

In my recent role at FlowSpace.co, I led the migration of a legacy system to a modern Next.js and Laravel architecture, scaling the platform to over 4,500 active users. During this time, I designed and deployed a production AI listing bot using n8n and Claude, which autonomously drafts workspace listings from multi-format brochures. I also built support AI agents directly against live production data, implementing confidence-based human escalation. This required navigating ambiguous requirements, driving technical discovery, and integrating deeply with external platforms via REST APIs and Webhooks.

I have extensive experience working with Python, TypeScript, and modern API integration patterns (OAuth 2.0, REST/SOAP). My work continuously requires mapping complex business workflows to technical solutions while keeping security and scalability in mind. Although my daily toolkit has not explicitly centered on Workday or ServiceNow in traditional enterprise IT, my background in building full-stack CRM automations and parsing complex data pipelines provides a strong, adaptable foundation to rapidly master the specific HR/IT paradigms essential to Leena AI's deployments.

I am drawn to Leena AI because it operates at the forefront of enterprise AI, turning conceptual models into real, measurable automation within the world's largest companies. I thrive in fast-paced, high-growth environments where I can build structure from ambiguity and bridge the gap between advanced technology and client-facing business outcomes. I am fully equipped to lead technical discussions, collaborate closely with stakeholders, and codify reusable integration patterns for the team.

Thank you for considering my application. I would welcome the opportunity to discuss how my background in full-stack engineering and AI integration aligns with the technical and client-facing goals of the Forward Deployed Engineer role at Leena AI.

Sincerely,
Prabhavit Gupta
