October 1, 2026 Dear Medtronic Hiring Team,

I am writing to express my enthusiastic interest in the AI Developer / Data Science Engineer I role (Req R73677) within the Clinical, Medical, Regulatory & Safety (CMRA) Technology Enablement team at Medtronic. Having built production AI automations and certified in Microsoft enterprise tooling, I am eager to contribute to your mission of empowering clinical operations with modern, responsible AI solutions.

With 2+ years of hands-on experience designing and deploying AI-driven productivity solutions and hyper-automation pipelines, my technical foundation directly mirrors your requirements:

- **Microsoft Enterprise AI Ecosystem:** Certified in Microsoft Copilot Studio (Agent Academy) and Microsoft Power Automate, with direct experience building custom conversational agents, Power Apps workflows, and automated triage systems.
- **LLM Solutions & Integrations:** Extensive experience implementing OpenAI and Azure OpenAI endpoints, CustomGPTs, structured JSON schema validations, and Model Context Protocol (MCP) tool integrations with Python and REST APIs.
- **Operational Hyper-Automation:** Architected end-to-end background automation pipelines, integrating third-party APIs, enforcing data contracts, handling retries, and maintaining high reliability across operational workflows.
- **Governance & Citizen Developer Enablement:** Passionate about establishing reusable templates, clear documentation, and adhering to strict enterprise standards for data privacy, security, and responsible AI adoption.

I hold a European Long-Term Residence Permit with full legal authorization to work across the EU without requiring visa sponsorship. Based in Italy (CET), I am well-aligned to collaborate seamlessly with your European teams.

I would welcome the opportunity to discuss how my hands-on technical skills and enthusiasm for responsible AI can deliver immediate value to Medtronic. Thank you for your time and consideration.

Kind regards,

Prabhavit Gupta
