Hiring Team: AI Central
NCS Group (Singtel Group)
5 Ang Mo Kio Street 62, NCS Hub
Singapore 569141
Role: Artificial Intelligence Engineer (Req: 4446993455)

Dear Hiring Team at NCS Group,

I am writing to express my strong interest in the Artificial Intelligence Engineer position within AI Central at NCS Group. As Singtel Group's enterprise technology powerhouse, NCS Group plays a defining role in architecting mission-critical digital transformation across Asia-Pacific. AI Central's commitment to advancing generative AI and autonomous agents beyond experimental proofs of concept into hardened, scalable, production platforms aligns directly with my engineering background: designing, deploying, and governing production-grade AI agents integrated with enterprise systems.

Over the past three years across European technology environments, I have specialized in turning complex business problems into production-ready software:

Autonomous Agents & LLM Orchestration: In production, I combine foundational models (Claude, OpenAI) with custom code in Python and TypeScript, designing multi-agent workflows, tool calling, and Retrieval-Augmented Generation (RAG) architectures. At FlowSpace, I engineered an automated multi-format ingestion pipeline (n8n, Claude API, TypeScript) extracting structured attributes from brochures, PDFs, spreadsheets, and web sources into validated schemas with human-in-the-loop review, drafting over 900 listings. I also authored github.com/prab-gupta/llm-doc-parser, an open-source parsing engine demonstrating schema enforcement and deterministic failure recovery.

Production Governance & Reliable Architecture: I deployed conversational support agents operating over live operational databases, incorporating confidence scoring thresholds and deterministic fallback paths that escalate ambiguous inquiries to human operators. Furthermore, I led FlowSpace's complete platform migration off a legacy stack onto a maintainable Next.js and Laravel (PostgreSQL) architecture, scaling from 2,000 to over 4,500 active users with zero downtime. I have built bidirectional REST API and webhook integrations with property management systems (OfficeRnD, Nexudus) with robust schema validation, audit trails, and automated error handling.

Forward-Deployed Mindset & Adaptability: Having delivered software across eight European companies and diverse client initiatives (including automated data parsing pipelines for UltraStrategy in France and application logic for Urlink in Spain), I ramp up rapidly in new technical contexts and high-stakes client environments. I prioritize test-driven verification (Playwright, unit testing), API contracts, and measurable business impact over unnecessary complexity.

I hold an Italian European Long Term Residence Permit, communicate fluently in English (professional C2), and am available immediately. I am fully open to relocating to Singapore to work on-site at the NCS Hub or collaborating through a remote contracting structure.

I would welcome the opportunity to discuss how my practical experience in AI agent orchestration, Python and TypeScript engineering, and enterprise API integration can contribute to AI Central's initiatives.

Sincerely,

Prabhavit Gupta
