**Hiring Team, Digital & IT**
Nadara
Role: AI Engineer (Job ID: R0001533)
Location: Milano, Italy (Hybrid)

Dear Hiring Team at Nadara,

I am writing to express my strong interest in the AI Engineer position at Nadara in Milan. As a leading European independent power producer managing over 4.2 GW of renewable energy across wind, solar, and storage, Nadara is driving the clean energy transition through digital innovation. Scaling sustainable energy operations requires embedding intelligent automation and AI-driven capabilities into business processes. Your focus on designing custom copilots, conversational AI agents, and enterprise workflows across Microsoft Copilot Studio, Power Automate, and Azure AI Foundry aligns directly with my engineering background.

Over the past three years across European technology environments, I have specialized in turning operational requirements into robust, production-ready AI solutions:

- **Microsoft Copilot Studio & Agentic AI:** Certified in Microsoft Copilot Studio Agent Academy and Building AI Agents, I build custom copilots and conversational systems connected to live data sources and enterprise APIs. At FlowSpace, I engineered autonomous AI support agents that resolve user queries against live databases with confidence scoring and deterministic escalation to human operators, championing responsible AI governance.
- **Process Automation & Model Operationalization:** Certified in Microsoft Power Automate, I develop event-driven workflows connecting operational systems, CRMs, and external services. I built an end-to-end multi-format ingestion pipeline extracting validated JSON from complex brochures across 900+ entities, and I am experienced operationalizing models using Azure OpenAI, Azure AI Search, Prompt Flow, and structured retrieval.
- **Software Engineering & Data Integration:** Proficient in Python, TypeScript, and SQL, I bridge foundational AI capabilities with operational data layers, including relational stores and Snowflake Cortex AI pipelines. At FlowSpace, I led the core platform migration off a legacy stack to a modern Next.js and Laravel architecture, scaling from 2,000 to 4,500+ users with zero downtime.

Graduating from Ca' Foscari University of Venice with a degree in Philosophy, International Studies & Economics, I combine analytical reasoning and systems logic with practical software delivery. Holding an Italian EU Long Term Residence Permit, I possess full legal authorization to work in Italy and across the EU without visa sponsorship. I am based in Venice, speak fluent English (C2) alongside conversational Italian, and am fully available for regular hybrid on-site presence at your Milan offices as well as business travel.

I welcome the opportunity to discuss how my expertise in Microsoft Copilot Studio, Power Automate, and production AI engineering can deliver immediate value to Nadara's Digital and IT team.

Kind regards,

Prabhavit Gupta
