October 1, 2026 Dear Nebius Engineering and Integrations Team,

I am writing to express my strong interest in the Application Integration Developer position at Nebius. With extensive experience architecting production REST API integrations, event-driven webhooks, and secure backend data synchronizations using Python and modern cloud tooling, I am excited by Nebius's mission to build the high-performance AI cloud platform for global developers and enterprises.

At FlowSpace.co and across my European engineering projects, I have specialized in building reliable, fault-tolerant system bridges between critical business platforms and databases. Here is how my background directly aligns with your requirements:

- **System & API Integrations:** Engineered multi-system integrations connecting external booking platforms (OfficeRnD, Nexudus) and CRM pipelines, handling complex payload mappings, automated pagination, rate-limiting, and idempotency.
- **Python & Cloud-Native Development:** Built and deployed backend services and micro-automations using Python, implementing structured validation layers, OAuth 2.0 authentication flows, and relational database operations (PostgreSQL).
- **Reliability & Production Operations:** Designed event-driven webhook processors and automated alerting pipelines, establishing comprehensive error recovery, retry mechanisms, and data consistency safeguards.

I thrive in autonomous, fast-moving environments where robust software engineering eliminates operational fragmentation. I hold a European Long-Term Residence Permit with unrestricted authorization to work across the EU without visa sponsorship, and I am based in Central European Time with immediate availability.

I would welcome the opportunity to discuss how my hands-on integration background can contribute to Nebius's engineering ecosystem. Thank you for your time and consideration.

Kind regards,

Prabhavit Gupta
