October 1, 2026 Dear Nebius Customer Service Engineering Team,

I am writing to express my strong enthusiasm for the Automation Engineer (Customer Service) role at Nebius. As an automation engineer specializing in n8n workflows, Python backend integrations, and LLM-powered support agents, I am thrilled by Nebius's trajectory as a global AI cloud leader and by your team's mission to eliminate manual operational toil through robust, event-driven automation.

At FlowSpace.co and across my engineering engagements, I have focused precisely on transforming high-volume operational bottlenecks into self-service, maintainable automated systems. My background directly aligns with what you are building:

- **n8n & Event-Driven Workflows:** Extensive experience building resilient production pipelines in n8n and Python, handling webhook triggers, error handling, rate limiting, and automated multi-channel notifications.
- **LLM-Powered Support Agents:** Architected autonomous AI agents and real-time copilot workflows that parse unstructured tickets, extract parameters, perform tool-calling against internal APIs, and assist engineers with immediate resolution contexts.
- **API Integrations & Self-Service Tooling:** Deep experience integrating Jira API, billing and CRM endpoints, and relational databases (PostgreSQL) to automate recurring tasks like account management, data parsing, and user quota validations.

I thrive in fast-paced, high-ownership engineering cultures where developer-centric tools power rapid scale. Based in Italy, I hold a European Long-Term Residence Permit with unrestricted authorization to work across the EU without requiring visa sponsorship, and I am fully set up to collaborate seamlessly within Central European Time.

I would welcome the opportunity to discuss how my automation experience can help your team scale Nebius's customer operations. Thank you for your time and consideration.

Kind regards,

Prabhavit Gupta
