Dear Nebuly Hiring Team,

I am writing to apply for the Forward Deployed Engineer role at Nebuly. The mission to build an accountability layer for enterprise AI and prove real ROI resonates deeply with my focus on building production-ready pipelines. Working as a forward deployed engineer, I know how critical it is to sit at the boundary between the engineering team and enterprise customers, translating ambiguous constraints into robust, secure technical architectures that work within their perimeters.

In my recent work at FlowSpace and for other clients, I have taken end-to-end ownership of deploying software solutions for complex needs. Leveraging Python, API integrations, Docker, and CI/CD, I have automated workflows and integrated them securely into client environments. Key highlights include:

- **Customer-Embedded Execution:** Partnered directly with client stakeholders and technical teams to deploy pipelines, adapting our software to their unique infrastructure and security constraints.
- **Infrastructure & Automation:** Automated complex deployments and operations using Python scripting and CI/CD workflows, ensuring reliable delivery (often accelerated by AI assistants like Claude Code).
- **End-to-End Ownership:** I treat the job as undone until the system is live, secure, and fully operational in the customer's environment, troubleshooting complex architectural issues along the way.

While I am continuing to build deep hands-on expertise with Kubernetes and Terraform, I have a strong foundation in modern cloud deployments, networking concepts, and automation tooling. I am a fast learner who thrives in high-stakes, autonomous environments and am fully committed to mastering the stack required to keep Nebuly deployments healthy and upgraded.

Living in Venice, the hybrid setup with travel from Turin is an excellent fit for me. Furthermore, while my professional English is native-level, I want to be transparent that my Italian is currently at a beginner level; however, I am actively improving it and am eager to support Italian enterprise clients effectively.

I would welcome the opportunity to bring my problem-solving skills and customer-facing mindset to Nebuly, ensuring that every deployment is successful and every customer is fully empowered.

I look forward to discussing how I can contribute to your team.

Kind regards,

Prabhavit Gupta
