Dear NiCE hiring team,

I am writing to apply for the Forward Deployed Engineer position at NiCE. With hands-on experience building production AI agents and integrating them into enterprise workflows, I specialize in the exact intersection of product engineering and customer success this role requires. My background in rapid, end-to-end deployment aligns perfectly with your team's mission to architect scalable agentic AI systems that tackle high-priority business challenges.

At FlowSpace, I engineered custom customer support agents utilizing Claude and Python that query live platform data and manage intelligent escalation. This was not a proof of concept. It shipped to production and directly improved our customer interactions. Here is how my experience maps to your requirements:

- **Production AI Agents:** Engineered and deployed intelligent customer support agents at FlowSpace that integrate directly with live databases, managing nuanced customer inquiries before human escalation.
- **Enterprise Integrations & Workflow:** Architected complex integrations for clients using Python, TypeScript, and APIs, migrating systems to modern architectures and ensuring seamless AI data extraction.
- **End-to-End Ownership:** Owned the entire AI lifecycle across multiple freelance projects, from requirements gathering with decision-makers to deploying LLM-based pipelines using Claude Code, n8n, and Next.js.

I am particularly excited about NiCE because of your commitment to pushing the boundaries of what agentic AI can achieve at scale in the enterprise. Operating in ambiguity and translating business problems into robust software is where I thrive, and I am eager to bring my builder's mentality and experience to your Forward Deployed Engineering team.

I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
