Dear NodeReal hiring team,

I am writing to apply for the Back End Developer (Golang) position at NodeReal. As a Backend and AI Engineer with deep experience in building scalable services and a proven track record of leveraging AI agents to accelerate development workflows, I am highly aligned with NodeReal's mission to build the "AWS of Web3".

In my recent role at FlowSpace, I focused heavily on designing event-driven architectures and integrating complex APIs while managing rate limits, webhooks, and retry logic for high-throughput workloads. A significant part of my workflow involves utilizing AI-assisted coding and multi-agent orchestration, directly mirroring the practices you value for improving development velocity and code quality.

While my primary production background has centered on Python, TypeScript, and Node.js rather than Golang, I possess the strong logical thinking and fast learning curve you highlight as key requirements. I am fully prepared to ramp up on Go rapidly, leveraging my foundation in concurrent programming, distributed systems, and network protocols to immediately contribute to your RPC gateways and data indexing services.

What excites me most about NodeReal is the scale of your infrastructure, powering over 50% of the Top 50 Projects on BNB Chain and Aptos. I thrive in high-velocity startup environments and am eager to bring my backend engineering skills and AI tooling expertise to your globally distributed team.

I would welcome the opportunity to discuss how my technical agility and builder mindset can support NodeReal's Web3 infrastructure. Thank you for considering my application.

Kind regards,

Prabhavit Gupta
