Hiring Team & Forward Deployed AI Engineering
OMMAX
Friedrichstrasse 10, 80801 Munich, Germany (and Milan Office)
Role: Forward Deployed AI Engineer (Ref: LinkedIn 4465420391)

Dear OMMAX Hiring Team,

I am writing to express my strong interest in the Forward Deployed AI Engineer position at OMMAX. OMMAX stands out for its high-impact model of pairing strategic digital transaction advisory with hands-on technical execution. As enterprise clients and private equity portfolio companies seek to capitalize on generative and agentic AI, the defining challenge is moving past theoretical pilots into reliable, production-ready software that delivers measurable business outcomes. As an engineer specializing in production AI agents, enterprise API integrations, and modern full-stack development, I thrive in embedded roles where engineering precision solves real operational bottlenecks.

Having delivered software solutions across eight European technology organizations, I bring a builder mindset centered on rapid prototyping, robust system architecture, and close stakeholder alignment:

- **End-to-End AI Solution Design & Agentic Workflows:** I build and deploy production AI systems combining modern LLM APIs (Claude, OpenAI) with custom Python and TypeScript architectures. I have hands-on experience designing multi-step agent orchestration, tool and function calling, and Retrieval-Augmented Generation (RAG). At FlowSpace, I architected an automated multi-format ingestion pipeline (Python, TypeScript, Claude API, n8n) extracting structured attributes from PDFs, spreadsheets, and web sources into validated JSON schemas with human-in-the-loop review, drafting over 900 production listings. I also authored an open-source parsing engine (github.com/prab-gupta/llm-doc-parser) demonstrating schema validation and deterministic error recovery. Claude Code is my daily driver for rapid development and testing.
- **Embedded Client Delivery & Enterprise Systems Integration:** Forward deployed engineering demands bridging technical systems with client operations. At FlowSpace, I deployed customer-facing support AI agents querying live operational databases, incorporating confidence scoring thresholds and deterministic fallbacks that escalate ambiguous requests to human staff. Additionally, I built bidirectional REST API and webhook integrations with property management and CRM platforms (OfficeRnD, Nexudus) with automated rate-limit handling and retry logic. I also spearheaded the zero-downtime platform migration off a legacy stack onto Next.js and Laravel (PostgreSQL), scaling active users from 2,000 to over 4,500.
- **Modern Web Applications & Reusable Delivery Assets:** I develop intuitive, responsive web interfaces using Next.js and React, ensuring AI-driven capabilities are accessible to non-technical business users. I focus on creating modular, reusable engineering patterns, documentation, and evaluation benchmarks (tracking latency, accuracy, and hallucination guardrails) that accelerate time-to-value across successive client engagements.

Holding an Italian European Long Term Residence Permit, I possess unrestricted legal authorization to work in Italy and throughout the European Union without visa sponsorship, and I am available immediately. Based in Venice, I am well-positioned for regular on-site presence at your Milan office or client sites across Europe, as well as travel to your Munich headquarters. I communicate with professional C2 fluency in English and conversational Italian.

I would welcome the opportunity to discuss how my hands-on experience in agentic AI deployment, enterprise integrations, and forward-deployed engineering can contribute to OMMAX and your clients.

Kind regards,

Prabhavit Gupta
