Marta Della Valle and the Hiring Team
Pillar
Barcelona, Spain / Milan, Italy
Role: AI Engineer (LinkedIn: 4473012716)

Dear Marta Della Valle and the Pillar hiring team,

I am writing to express my interest in the AI Engineer role at Pillar. Your mission to build the financial operating system for construction by bringing AI and automation to a fragmented industry strongly resonates with my background in deploying LLM-powered applications that solve real-world operational problems.

As an AI Solutions Engineer, I specialize in moving beyond prototypes to build production-grade agentic workflows, RAG systems, and automated data pipelines. I am highly comfortable across a modern TypeScript stack (Next.js, Node/Deno, Supabase), frequently integrating LLMs to turn unstructured inputs into structured, actionable data.

AI-Native Product Development: At FlowSpace.co, I drove the integration of AI agents and automated workflows to streamline customer support and lead enrichment, directly impacting a user base that scaled to over 4,500 users.

Document Extraction Pipelines: I have developed data extraction tools and data processing pipelines using n8n and Eden AI, turning complex unstructured files into structured formats for automated decision-making.

Full-Stack Integration: I have hands-on experience migrating legacy systems to Next.js and Supabase while seamlessly orchestrating external APIs, embedding AI into the core product architecture.

Pillar's focus on building reliable AI systems that directly impact job site margins requires someone who can navigate ambiguity and take end-to-end ownership. Having worked extensively in fast-paced startup environments, I thrive on taking initiative, deeply understanding the product problem, and shipping robust solutions.

Based in Italy with a European Long Term Residence Permit (no sponsorship required), I am available to join your engineering team and contribute to your Barcelona or Milan office. I look forward to discussing how my experience in orchestrating LLMs and building AI-native workflows can contribute to Pillar's continued growth.

Kind regards,

Prabhavit Gupta
