Dear QuantumBlack Hiring Team,

When I read about QuantumBlack's mission to connect AI strategy to execution through EcliptOS and agentic systems, I knew my background as an engineer who embeds with clients to ship multi-step LLM pipelines was a direct fit. I am writing to express my strong interest in the Senior Forward Deployed Engineer position, where I can leverage my experience in bridging ambiguous business challenges and scalable production architecture to drive rapid time-to-value for your enterprise clients.

At FlowSpace, I owned the end-to-end delivery of an enterprise AI pipeline that orchestrated LLM agents with tool use and RAG. Much like the forward deployed model at QuantumBlack, my role required diving into the client's technical environment, understanding their specific bottlenecks, and deploying a robust solution that integrated seamlessly with their legacy APIs. Here is how my experience maps to your needs:

- **Platform Delivery & Adoption:** Embedded directly into customer ecosystems to architect and deploy AI agents, managing complex state and retry logic while ensuring non-technical stakeholders successfully adopted the new workflows.
- **Production Readiness:** Built strict human-in-the-loop governance and schema validation pipelines for LLM outputs, ensuring reliability, low hallucination rates, and enterprise-grade security before pushing to production.
- **Infrastructure Integration:** Orchestrated containerized deployments and connected intelligent agents to live CRMs and booking systems, overcoming API rate limits and infrastructure constraints to deliver measurable business impact.

What excites me most about QuantumBlack is the opportunity to work at the bleeding edge of enterprise AI adoption, scaling EcliptOS across diverse cloud infrastructures. I thrive in consultative settings where I can act as the conduit between product engineering and real-world client operations. My blend of deep technical expertise in Python, Next.js, and agentic workflows, combined with a focus on client enablement, positions me well to troubleshoot complex deployments and contribute to your continuous feedback loop.

I would welcome the opportunity to discuss how my hands-on experience deploying AI systems into the wild aligns with the goals of your forward deployed engineering team. Thank you for your time and consideration.

Kind regards,

Prabhavit Gupta
