Rebellions
Singapore

Application for Forward Deployed Engineer (Singapore)

Dear Hiring Manager,

I am writing to apply for the Forward Deployed Engineer position at Rebellions. Rebellions' commitment to redefining high-performance AI inference systems presents the kind of technical challenge I excel at: bridging cutting-edge AI architecture with the specific, complex needs of enterprise clients. While I am based in Europe, I am highly motivated to relocate to Singapore to bring my background in deploying multi-step agentic systems directly into the heart of Rebellions' customer engagements.

As a Full-Stack & AI Engineer for FlowSpace.co, I operated effectively as an FDE by embedding directly into customer environments. I designed and deployed scalable AI pipelines that orchestrated multi-step LLMs and RAG architectures against live APIs. Crucially, I took ownership of the entire process from prototyping and architectural design to executing Proofs of Concept and ensuring production readiness. Working with Python, TypeScript, and cloud platforms like AWS and Azure, I continuously optimized end-to-end performance by characterizing system latency and configuring resilient serving stacks.

Rebellions requires an FDE who can context-switch seamlessly between code-level debugging, Kubernetes configuration, and strategic sales partnerships. In my project management and development work for Urlink and UltraStrategy, I regularly partnered with non-technical stakeholders to translate complex requirements into deployable solutions. Although working directly with AI silicon inference optimization is a natural extension of my current expertise, my background in building production-grade LLM applications ensures I can rapidly master your serving stack and deliver immediate value in customer deployments.

I would welcome the opportunity to discuss how I can help Rebellions accelerate customer adoption and execute successful technical deployments in the APAC region. I am open to discussing relocation options or visa sponsorship as may be required for the Singapore role.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
