Dear Salesforce Hiring Team,

As an AI Engineer who designs and ships production agentic workflows, I am applying for the Senior Forward Deployed Engineer position at Salesforce. Based in Italy with conversational fluency in Italian and native-level English, I am equipped to collaborate directly with Italian-speaking enterprise clients, translating their complex requirements into scalable AI solutions.

My background bridges full-stack engineering and applied AI, enabling me to own end-to-end technical delivery. As a Lead Developer, I recently migrated a marketplace to a robust Next.js and Laravel stack while simultaneously deploying the AI layer on top. My experience mapping directly to your focus on Agentic AI includes:

- **Production Agentic Workflows:** Designed an AI bot that ingests multi-format brochures (PDF, website, photo) to draft structured listings with a human-in-the-loop escalation.
- **Customer-Facing Deployments:** Engineered and deployed RAG-based AI agents to answer queries against live platform data, ensuring safe, confidence-based fallbacks.
- **Technical Implementation:** Scaled a live platform from 2,000 to 4,500+ users, managing API integrations (Next.js, Python, n8n) and ensuring system reliability.

Salesforce's commitment to delivering secure, enterprise-grade AI through Agentforce aligns perfectly with my focus on building practical, high-impact AI systems. I thrive in environments where I act as a technical builder and advisor, partnering with clients to solve their most challenging problems through intelligent automation.

I would welcome the opportunity to discuss how my hands-on AI deployment experience and Italian language skills can drive value for Salesforce and its customers. I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
