Satispay Hiring Team
Satispay

Re: Software Engineer III, Backend - Consumer Wealth Domain

Dear Hiring Team,

Traditional banking has often left users alienated, but Satispay's mission to empower people through accessible and seamless financial services resonates strongly with my product-minded approach to engineering. I am writing to apply for the Software Engineer III, Backend position within the Consumer Wealth Domain, as I am excited by the challenge of building the engines that enable millions of users to manage their savings and investments reliably.

Over the past three years as a Backend Engineer and Lead Developer, I have architected and scaled robust, high-throughput backend systems for fast-paced platforms like FlowSpace. I have hands-on experience designing resilient database schemas in PostgreSQL and orchestrating microservices in cloud environments. My work inherently focuses on transactional consistency, data integrity, and driving cross-functional system reliability through strict CI/CD practices and comprehensive API contract validations.

While my recent stack has centered around TypeScript, Node.js, Laravel, and Python rather than Java and Spring Boot, my foundational backend principles–building scalable microservices, ensuring relational data consistency, and maintaining cloud infrastructure–are highly transferable. I am a fast learner, deeply accustomed to leveraging AI-powered development tools daily to rapidly absorb new paradigms, optimize code, and accelerate root-cause analysis. I am confident in my ability to quickly ramp up on your Java/Spring Boot stack while bringing immediate value through architectural insights and a relentless focus on operational excellence.

Satispay's culture of ownership and refusing to wait for someone else to fix what is broken aligns perfectly with my independent engineering background. I would welcome the opportunity to discuss how my expertise in scalable backend architecture and AI-assisted development can contribute to building the world's most loved financial platform.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
