Dear Sinch hiring team,

As an engineer who has spent the last few years bridging the gap between external client requirements and internal product capabilities, the Senior Forward Deployed Engineer role at Sinch resonates strongly with me. I have built a career on architecting API-driven production systems, integrating complex platforms, and leveraging AI to accelerate software delivery. The challenge of deploying and scaling communications APIs across enterprise environments is exactly the kind of high-impact work I excel at.

At FlowSpace and Urlink, I operated as the primary technical liaison for clients, translating their ambiguous integration needs into precise data models and engineering specifications. I led the end-to-end migration and scaling of a live marketplace to a Next.js and Node.js stack, growing it to over 4,500 active users with zero downtime.

Here is how my technical background maps to Sinch's requirements:

- **Enterprise API Integration:** Designed and deployed scalable REST APIs, webhooks, and CRM integrations, seamlessly connecting third-party systems to core platforms and data stores.
- **AI-Accelerated Delivery:** Routinely leverage coding agents (Claude, OpenAI) to accelerate feature development, troubleshooting, and documentation while maintaining strict engineering accountability.
- **Technical Leadership Under Pressure:** Experienced in scoping MVPs, making architectural tradeoffs, and managing live cutovers while communicating transparently with business and technical stakeholders.

While my primary depth lies in robust TypeScript and Node.js backend services, my deep experience in REST APIs and asynchronous events equips me to quickly master Voice, Messaging, and Email domains. I am highly motivated to learn adjacent CPaaS products with SME support and turn field evidence into reusable implementation assets for Sinch.

I look forward to discussing how my blend of production engineering and client-facing delivery can accelerate deployments for Sinch's enterprise customers.

Kind regards,

Prabhavit Gupta
