Traveloka Engineering & IT Team
Shanghai, China

Subject: Application for (Senior) Backend Engineer

Dear Hiring Manager,

I am writing to express my strong interest in the (Senior) Backend Engineer position at Traveloka in Shanghai. With a robust background in designing and scaling resilient backend systems, and a deep appreciation for the impact of seamless travel technology, I am excited by the opportunity to contribute to Traveloka's mission-critical data integrations and API architectures.

In my role as a Backend Engineer at FlowSpace, I focused heavily on scalable architectural design and high-performance data processing. I built event-driven systems that integrated complex APIs, managing strict rate limits and asynchronous job processing to ensure fault tolerance under high-throughput workloads. By migrating legacy infrastructure to a more performant PostgreSQL-backed stack, I was able to optimize system reliability and actively support the scaling of our user base from 2,000 to over 4,500. This experience directly aligns with Traveloka's requirement to maintain and optimize existing systems for peak performance and reliability.

While my core foundational expertise is rooted in Python and Node.js, I bring a demonstrated ability to rapidly adapt to new languages and paradigms. Using AI-assisted workflows—specifically leveraging Claude Code—I swiftly cross-train into new ecosystems. I am confident in my ability to immediately contribute to Traveloka's Java and Go services, maintaining the high software quality and rigorous testing standards expected of your team. I take a profound sense of ownership in my work, ensuring that architectural decisions and code reviews translate into robust, world-class products.

Furthermore, as an adaptable engineer who thrives in dynamic environments, I am highly collaborative and fully fluent in English, ensuring clear communication in cross-functional architectural discussions. I am enthusiastic about the prospect of relocating to Shanghai and joining a team that drives innovation in the travel tech sector.

Thank you for considering my application. I look forward to discussing how my backend engineering experience, ownership mindset, and AI-accelerated adaptability can bring immediate value to the Traveloka Engineering team.

Sincerely,

Prabhavit Gupta
