Dear United Digital Group hiring team,

As an AI Engineer with a strong track record of building and shipping production AI agents, I was immediately drawn to the Forward Deployed AI Engineer position. The opportunity to bridge cutting-edge GenAI with direct client value aligns perfectly with my background in deploying LLM workflows and agentic systems into live business environments.

In my recent role as Lead Developer at FlowSpace, I focused heavily on translating complex operational challenges into reliable automated systems. I consistently worked at the intersection of technical architecture and product strategy. My key contributions include:

- **Production AI Agents:** Built an AI listing bot utilizing Claude and n8n that processes unstructured brochures to draft ready-to-publish workspace listings, incorporating human-in-the-loop safeguards.
- **GenAI Workflows:** Engineered automated CV-parsing pipelines and contextual support agents that query live data while utilizing confidence-based escalation.
- **Client-Facing Delivery:** Mediated between internal stakeholders and client requirements as a Project Manager for Urlink, utilizing AI-assisted tools to ship tailored Next.js platforms.
- **Full-Stack Integration:** Led the seamless migration of a marketplace from a legacy platform to a coded Next.js and Laravel stack, ensuring zero downtime for 4,500+ active users.

United Digital Group's commitment to delivering actionable, production-ready AI capabilities for enterprise clients stands out to me. I am particularly excited about the forward-deployed nature of this role, where my experience navigating ambiguous requirements and architecting scalable LLM solutions can drive immediate business impact for your partners.

I would welcome the opportunity to discuss how my hands-on experience with prompt engineering, RAG, and workflow automation can contribute to the team at UDG. I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
