Hiring Team
VMWay

Dear Hiring Team,

I am writing to express my strong interest in the RPA Developer - UiPath position at VMWay. With a robust background in building automated workflows and AI-driven solutions for European tech startups, I specialize in transforming complex business processes into streamlined, scalable systems that drive operational efficiency.

At FlowSpace.co, I have focused heavily on end-to-end process automation, integrating diverse APIs, and structuring reliable workflow architectures. I engineered critical go-to-market automations, sales funnel pipelines, and data parsing tools using automation platforms like n8n and Eden AI. My work consistently reduced manual processing time, increased data accuracy, and enabled seamless data flow across platforms like Office RnD, Nexudus, and our internal CRM systems.

Furthermore, I have hands-on experience designing and implementing AI-assisted agents for automated data scraping, robust business logic operations, and customer support, leveraging tools like Typescript and Playwright to build resilient logic flows. This involved creating automated pipelines to handle unstructured data, which aligns closely with the objectives of many enterprise RPA initiatives.

While my core stack revolves around n8n, API-driven automations, and scripting, my deep understanding of process orchestration, system integration, and workflow logic maps directly to UiPath's ecosystem. I approach automation with a focus on scalability and maintainability, ensuring that every automated process is well-documented, tested, and robust against exceptions. I am eager to bring my problem-solving mindset to VMWay to help accelerate your digital transformation and process automation projects.

I look forward to discussing how my technical background in automation logic, API orchestration, and AI-driven solutions can deliver immediate impact as an RPA Developer on your team.

Sincerely,

Prabhavit Gupta
