Hiring Team - AI Center of Excellence
ams OSRAM
Rua do Casal do Canas 1, 2790-204 Carnaxide
Lisbon, Portugal
Role: Agentic AI Engineer (d/m/f)

Dear Hiring Team,

I am writing to express my strong interest in the Agentic AI Engineer (d/m/f) position within the AI Center of Excellence at ams OSRAM. As a global pioneer in optical technologies and sensor intelligence, ams OSRAM operates at the forefront of digital transformation. Your initiative to empower enterprise business units through agentic AI, intelligent copilots, and automated workflows aligns directly with my engineering focus: designing, deploying, and governing production AI agents connected to mission-critical backend systems.

Over the past three years across European technology environments, I have specialized in building robust agentic systems that bridge generative AI models with enterprise data. My technical background maps directly to your core requirements:

Agentic AI, Copilot Studio & Microsoft Ecosystem: I hold certifications in Microsoft Copilot Studio Agent Academy, Microsoft Power Automate, and Building AI Agents. In production, I combine high-level orchestrators with custom code in Python and TypeScript, designing multi-agent workflows, tool-calling mechanisms, and Retrieval-Augmented Generation (RAG) pipelines. At FlowSpace, I engineered an automated multi-format ingestion pipeline (n8n, Claude API, TypeScript) extracting structured attributes from PDFs, spreadsheets, and web sources into validated backend schemas, with over 900 entities processed. I have also open-sourced this parsing architecture at github.com/prab-gupta/llm-doc-parser, highlighting schema validation and deterministic failure recovery.

Enterprise Integrations & API Reliability: I bring extensive experience integrating complex third-party platforms and REST APIs with strict schema contracts, webhook listeners, and error-handling routines (such as booking platforms OfficeRnD and Nexudus, and relational databases like PostgreSQL and Supabase). I understand the architecture required to integrate AI agents securely with enterprise backends such as SAP, M365, and proprietary service layers while maintaining data integrity and audit logging.

Human-in-the-Loop Governance & Citizen Developer Enablement: In production, I deployed customer-facing support agents operating over live operational data. To guarantee accuracy, I implemented confidence scoring thresholds and deterministic fallback paths that escalate uncertain queries to human specialists. I am deeply familiar with establishing governance frameworks, defining reusable templates, and guiding non-technical stakeholders to safely build and adopt AI automations.

I hold an Italian European Long Term Residence Permit, providing unrestricted work authorization across the European Union with no visa sponsorship required. I communicate fluently in English (C2) and am available immediately for on-site or hybrid collaboration in Carnaxide.

I look forward to discussing how my experience with Microsoft Copilot Studio, agentic orchestration, and enterprise API engineering can contribute to ams OSRAM's AI Center of Excellence.

Sincerely,

Prabhavit Gupta
