October 1, 2026 Dear CallMiner Hiring Team,

When I read the Forward Deployed Engineer position at CallMiner, I immediately recognized the exact intersection of conversation design and integration engineering I have been working in. I specialize in building AI agents from 0 to 1 and deploying them to production. Your mission to uncover customer needs through conversation intelligence aligns perfectly with my background in building data ingestion pipelines and intelligent automations.

In my role as a Lead Developer at FlowSpace, I serve as the technical counterpart to clients, translating complex business constraints into working software architectures. I regularly tackle ambiguous problems, build hypotheses, and ship production-grade code that moves real business metrics.

- **Agent Design & Deployment:** Built a flagship AI-driven bot that ingests raw, unstructured brochures (PDFs, images) to draft complete workspace listings, utilizing human-in-the-loop LLM evaluation to eliminate manual data entry bottlenecks.
- **Integration Engineering:** Owned the integration surface for critical Proptech APIs (OfficeRnD and Nexudus), connecting complex systems of record to handle automated bookings, webhooks, and map flows.
- **Software Architecture:** Led a full migration of a legacy platform to a Next.js and Laravel stack, ensuring safe data transit and scaling the platform to support over 4,500 active users.

CallMiner's focus on solving real customer problems through AI is exactly where I want to be. The opportunity to deploy alongside customer engineers and stay accountable past go-live resonates with how I approach technical ownership. Although based in Italy, I hold a European Long Term Residence Permit and am fully open to relocating to Prague to work closely with your regional customers and the global EMEA team.

I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
