Hiring Team
kausable GmbH
Heidelberg, Baden-Württemberg, Germany
Role: Software Engineer Enablement and Product (Req: 4453440697)

Dear Hiring Team at kausable,

I am writing to express my strong interest in the Software Engineer Enablement and Product role at kausable in Heidelberg. Your mission of "Putting Science at the Core of AI" by translating causal foundational models into real-world products requires a dual focus: building developer platforms that empower research colleagues, and shipping the software layer that makes advanced capabilities intuitive for end users. Bridging that exact boundary has defined my engineering work over the last three years across European startups.

To answer your prompt directly: my favorite way to drink coffee is a freshly brewed Italian stovetop Moka espresso, taken dark and straight to start the day.

On the Enablement side, I understand that research velocity depends on reducing setup friction and cognitive load. At FlowSpace, I owned developer workflows, internal tooling, and automation pipelines end to end. I built an AI ingestion system using TypeScript, Claude API, and n8n that parses complex multi-format brochures (PDFs, spreadsheets, web URLs) into structured entities with human-in-the-loop review, drafting over 900 verified listings. I incorporate agentic engineering tools like Claude Code into my daily workflow to automate boilerplate, maintain clear repository standards, and establish reproducible development environments.

On the Product side, I own customer-facing software from scoping through production delivery. I led the migration of FlowSpace's live marketplace off a legacy stack onto a maintainable Next.js and Laravel architecture, scaling active users from 2,000 to over 4,500 while maintaining continuous uptime. I also deployed conversational support agents operating over live platform records with confidence-based fallback to human operators, and built resilient REST and webhook integrations (OfficeRnD, Nexudus). My priority is always designing clean abstractions, thoughtful APIs, and modular frontends that keep complex backend systems adaptable and reliable.

I bring a pragmatic, self-directed operating style, disciplined complexity management, and comprehensive testing habits (Playwright, unit testing). I hold an Italian European Long-Term Residence Permit (granting full EU work authorization across Germany with no visa sponsorship required), communicate fluently in English (C2), and am based in Venice. I am excited by your hybrid collaboration model and fully available for regular monthly in-person team meetups at your Heidelberg office.

I would welcome the opportunity to discuss how my experience across developer tooling, Python, TypeScript, and production AI delivery can contribute to kausable.

Sincerely,

Prabhavit Gupta
