Motivation letter for Application for AI Safety Specialist – Remote (Mercor)

Dear Hiring Manager,

I am writing to express my strong interest in the AI Safety Specialist position at Mercor. Mercor connects elite technical talent with leading frontier AI research labs to evaluate, stress-test, and align advanced generative models. Ensuring model safety, robustness, and human alignment before deployment directly mirrors my professional focus. With hands-on experience in LLM orchestration, adversarial prompt evaluation, human-in-the-loop review pipelines, and an academic foundation in analytical philosophy and logic from Ca' Foscari University of Venice, I bring both technical execution and conceptual rigor to evaluating frontier AI systems.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure as Lead Developer at FlowSpace (London), I managed the platform and orchestrated LLM agent pipelines scaling from 2,000 to over 4,500 active users. I designed an automated AI listing tool and support systems that ingest unstructured source data, orchestrate multi-step reasoning, and enforce strict schema validation and confidence-based human-in-the-loop review, catching hallucinations, prompt anomalies, and edge-case failures before production commit.

My daily engineering and evaluation workflow revolves around the exact requirements of this role: designing adversarial prompts to stress-test frontier models, probing edge cases for jailbreaks, prompt injections, and policy failures, and evaluating model robustness across nuanced domains. Connecting foundational models (Anthropic Claude, OpenAI) with automated evaluation harnesses, I systematically document failure modes and benchmark model outputs to help researchers improve alignment and safety.

I extensively leverage AI coding assistants like Claude Code alongside modern frameworks (TypeScript, Next.js, Laravel, Python) to rapidly construct evaluation harnesses, test hypotheses, and deploy MVP architectures. Recently, I oversaw a complex architectural migration to a robust Next.js and Laravel stack, ensuring our rapid prototypes and automated pipelines adhered to strict security, data integrity, and reliability standards.

My background in Philosophy, International Studies and Economics from Ca' Foscari University provides strong analytical reasoning, formal logic, and ethical inquiry essential for evaluating grey-area safety risks. Furthermore, I continuously expand my technical capabilities, recently completing advanced training in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have lived in Venice for over 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and possess the professional English proficiency required for international collaboration. I am fully available for this remote engagement.

I would welcome the opportunity to discuss how my practical background in LLM orchestration, adversarial testing, and rigorous analytical evaluation can immediately contribute to Mercor's AI safety initiatives.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018, for the purposes of recruitment and selection.
