Hiring Team
MSD Czech Republic
IT Global Innovation Center
Platform AI Engineer – Market & Patient Access (Req: R416895)
Prague, Czech Republic

Dear Hiring Team,

I am writing to express my strong interest in the Platform AI Engineer role within Market & Patient Access at MSD Czech Republic. As an engineer specializing in AI automation, LLM orchestration, and platform integrations, I have spent the last three years building and shipping production-grade systems across Europe. MSD's mission to integrate artificial intelligence directly into the software engineering lifecycle to accelerate delivery and elevate engineering quality aligns directly with my hands-on background.

At FlowSpace, I led the core platform migration from a legacy architecture to a coded Next.js and Laravel stack, scaling the platform to over 4,500 active users while owning the backend APIs and AI systems end to end. As part of this, I architected and deployed an AI document ingestion pipeline using TypeScript, Claude, and n8n that parses unstructured files (PDFs, spreadsheets, web pages) into structured entities with human-in-the-loop review. I also built support agents connected to live platform databases with confidence-based escalation, and integrated complex third-party APIs (OfficeRnD, Nexudus) managing live webhooks and automated synchronization.

My daily engineering workflow centers on Python and TypeScript, bridging foundational models (Claude, OpenAI) with robust platform services, automated data pipelines, and developer tooling like Claude Code. Operating across international projects–including building automated CV data extraction tools with n8n and Eden AI for UltraStrategy in France, and AI-assisted platform logic for Urlink in Spain–I prioritize test-driven verification (Playwright, unit testing), clear architectural boundaries, and practical business impact over rigid adherence to legacy frameworks.

I hold an Italian European Long-Term Residence Permit (EU citizen equivalent for work authorization, requiring no visa sponsorship), graduated with a BA from Ca' Foscari University of Venice, and communicate fluently in English (C2). I am based in Venice and fully open to hybrid work or relocation to Prague.

I would welcome the opportunity to discuss how my practical experience in AI automation, Python and TypeScript development, and LLM orchestration can contribute to MSD's platform engineering initiatives.

Kind regards,

Prabhavit Gupta
