Motivation letter for Application for AI Engineer – Milano

Dear Hiring Manager,

I am writing to express my strong interest in the AI Engineer position at Nadara in Milano. As an AI Solutions and Automation Engineer based in Venice, I have been closely following Nadara's leadership in the European renewable energy sector across wind, solar, and storage. Nadara's strategic focus on driving digital efficiency by embedding custom copilots, conversational AI agents, and automated operational pipelines aligns directly with my engineering expertise across Microsoft Copilot Studio, Power Automate, and production LLM orchestration.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Laravel. Debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I utilize prompt chaining, RAG architectures, and Microsoft Copilot Studio to build custom conversational agents and embedded copilots. Through Power Automate and workflow tools such as n8n, I connect external APIs and enterprise data pipelines with foundational models from OpenAI and Anthropic. I thrive in a collaborative environment, prioritizing practical implementation and tangible business value over rigid adherence to specific legacy frameworks.

I extensively leverage AI coding assistants like Claude Code alongside low-code platforms and modern frameworks (Python, TypeScript, Next.js, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. Recently, I oversaw a complex architectural migration from a legacy infrastructure to a robust Next.js and Laravel stack, ensuring that our rapid prototypes evolved successfully into highly scalable, reliable, and secure enterprise products.

I am also proactive in learning new systems and technologies. I hold specialized credentials including Microsoft Copilot Studio Agent Academy, Microsoft: Introduction to Building AI Agents, and Microsoft Power Automate, equipping me to immediately deliver value within your enterprise Microsoft and Azure AI ecosystem.

As a graduate of Ca' Foscari University, I have lived in Venice for 5 years, hold an Italian EU Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also actively studying Italian and am fully available for hybrid on-site presence in Milan and short- or medium-term travel as operational needs require.

I would welcome the opportunity to discuss how my practical background in orchestrating AI capabilities, Microsoft Copilot Studio, and automating complex enterprise workflows can immediately contribute to your team of experts at Nadara.

Thank you for your time and consideration.

Sincerely,
Prabhavit Gupta
