Hiring Team
NCS Group
Application for Artificial Intelligence Engineer

Dear Hiring Team,

I am writing to express my strong interest in the Artificial Intelligence Engineer position at NCS Group. As an AI engineer specializing in agentic systems, LLM orchestration, and full-stack API integrations, I have followed NCS Group's leading role in enterprise technology services and digital transformation. NCS Group's focus on advancing generative AI and autonomous agents beyond experimental concepts into resilient, scalable production software in live enterprise client contexts aligns directly with my hands-on background shipping reliable AI solutions.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects. At FlowSpace (London, UK), I led the core platform migration from a legacy architecture to a coded Next.js and Laravel stack, scaling from 2,000 to over 4,500 active users while architecting and deploying AI capabilities end to end. I designed and shipped an automated AI document ingestion pipeline using TypeScript, Claude API, and n8n that drafts structured listings from unstructured brochures (PDFs, spreadsheets, websites) with human-in-the-loop review (900+ listings drafted). Furthermore, I deployed conversational AI support agents that resolve user queries against live database records with confidence-based human escalation, and engineered bidirectional integrations with OfficeRnD and Nexudus APIs.

My daily engineering workflow centers on Python and TypeScript, bridging foundational models (Claude, OpenAI) with enterprise backend services, vector retrieval (RAG) architectures, and workflow automation. Across European client initiatives–including engineering AI-based data parsing tools using n8n and Eden AI for UltraStrategy in France, developing AI-assisted platform logic for Urlink in Spain, and automating complex workflows for Get2Germany–I emphasize practical implementation, test-driven verification (Playwright, unit testing), robust error recovery, and measurable business impact over rigid adherence to legacy frameworks.

I hold an Italian European Long-Term Residence Permit (EU citizen equivalent for work authorization, requiring no visa sponsorship), graduated with a BA from Ca' Foscari University of Venice, and communicate fluently in English (professional C2). I am based in Venice and fully available for remote work, hybrid collaboration, or project-related travel.

I would welcome the opportunity to discuss how my practical experience in AI agent orchestration, Python and TypeScript development, and production API integration can immediately contribute to NCS Group's client solutions and AI initiatives.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
