Summary

Experienced software engineer specializing in Forward Deployed Engineering. Adept at bridging the gap between product engineering and customer success by translating complex business requirements into robust technical solutions. Strong background in Python, TypeScript, SQL, and LLM/AI integration on cloud infrastructure (AWS/GCP), with a proven ability to context-switch between technical architecture and client-facing communication.

Technical Skills

- **Languages:** Python, TypeScript, SQL, JavaScript
- **Cloud & Infrastructure:** AWS, GCP, REST/GraphQL APIs
- **AI & LLMs:** LLM APIs (OpenAI, Anthropic), AI Orchestration frameworks
- **Tools:** Git, Docker, CI/CD pipelines

Professional Experience

Freelance Software Engineer *Venice, Italy*
Independent Consultant *Present*

- Embedded directly with clients to build custom software solutions and integrate products into existing infrastructure.
- Architected and deployed enterprise AI solutions using LLM APIs, reducing manual operational tasks for clients.
- Developed full-stack applications using TypeScript and Python, managing both frontend delivery and backend cloud deployment on AWS/GCP.
- Communicated complex technical concepts to non-technical stakeholders, gathering business requirements and translating them into actionable engineering tasks.

Projects

AI Agent Orchestration Platform

- Built a scalable agentic workflow engine connecting multiple LLMs via REST/GraphQL APIs, enhancing workflow automation capabilities.

Education

Bachelor of Science in Computer Science
University of Padua *Padua, Italy*
