Software Engineer with extensive experience in developing highly scalable and maintainable backend systems using C# and .NET. Strong background in designing RESTful APIs with ASP.NET Core, implementing Dependency Injection, and utilizing ADO.NET for complex queries. Adept at applying OOP principles, design patterns, and asynchronous programming to build resilient data management platforms. Passionate about problem-solving, writing rigorous unit tests with mocking frameworks, and delivering high-quality software autonomously and as part of a team.

Core Competencies

- **C# & .NET Ecosystem:** Solid knowledge of C# syntax, ASP.NET Core middleware pipeline, LINQ, and asynchronous programming.
- **API & Architecture:** Expertise in building scalable REST APIs, applying OOP principles, and using established design patterns.
- **Data Access & Management:** Proficient in ADO.NET and Entity Framework, managing complex SQL queries, and handling database migrations for scalable data platforms.
- **Quality Assurance:** Experienced in error handling, collection management, and writing comprehensive Unit Tests utilizing Mocking frameworks.

Professional Experience

Tech Solutions S.p.A. **Milan, Italy**

Senior Backend Engineer *2021-2026*

- Architected and developed core back-end features using C# and ASP.NET Core, leveraging the middleware pipeline and Dependency Injection to ensure modularity.
- Designed data access layers using ADO.NET and ORMs, optimizing complex SQL Server queries and managing safe data migrations.
- Implemented asynchronous programming patterns to improve the performance and responsiveness of a high-throughput platform processing over 50,000 requests per minute.
- Established rigorous quality standards by writing comprehensive unit tests with mocking frameworks, ensuring maintainability and reducing production bugs.
- Collaborated closely with multidisciplinary teams, gathering requirements and managing the full development lifecycle from design to production support.

Innovatech IT **Venice, Italy**

Backend .NET Developer *2017-2021*

- Developed scalable REST APIs using C# and ASP.NET, adhering strictly to OOP principles and industry-standard design patterns.
- Handled complex data collection management and resilient error handling to maintain high availability in distributed systems.
- Utilized LINQ and ADO.NET for efficient data retrieval, reporting, and transformation.
- Demonstrated strong autonomy and time management, frequently taking ownership of complex backend components.

DataCorp **Bologna, Italy**

Software Engineer *2014-2017*

- Built data processing pipelines in C# to handle large volumes of transactional data.
- Optimized database performance through indexing and query tuning in SQL Server.

Education

University of Bologna **Bologna, Italy**

Master of Science in Computer Science *2011-2014*

Specialization in Distributed Systems and Software Architecture.

University of Bologna **Bologna, Italy**

Bachelor of Science in Computer Science *2008-2011*

Graduated with Honors.

Languages

- **English:** Fluent
- **Italian:** Native/Bilingual
