Summary

Experienced AI Forward Deployed Engineer specializing in building GenAI-powered web applications and leading technical transformations. Adept at bridging the gap between product engineering and customer success by translating complex business requirements into robust, AI-driven process automation solutions. Strong background in Python, TypeScript, SQL, and LLM orchestration frameworks, with a proven ability to context-switch between technical architecture, AI agent development, and client-facing stakeholder communication.

Technical Skills

- **Languages:** Python, TypeScript, Java, JavaScript, SQL
- **AI & Intelligent Agents:** LLM APIs (OpenAI, Anthropic), AI Orchestration frameworks, GenAI
- **Cloud & Infrastructure:** AWS, GCP, REST/GraphQL APIs, Docker, CI/CD
- **Deployment:** Platform configuration, debugging complex systems architectures

Professional Experience

Freelance Software & AI Engineer *Venice, Italy*
Independent Consultant *Present*

- Embedded directly with enterprise clients to manage the entire deployment lifecycle, from initial process workflow configuration to successful project hand-off.
- Architected and deployed custom enterprise AI solutions using modern LLM APIs, developing intelligent agents and custom skill files that significantly reduced manual operational tasks.
- Acted as the primary technical bridge, communicating complex architectural concepts to non-technical stakeholders and ensuring durable judgment throughout implementation.
- Developed full-stack applications using TypeScript and Python, troubleshooting and resolving technical limitations within client cloud environments (AWS/GCP).

Projects

AI Agent Orchestration Platform

- Built a scalable agentic workflow engine connecting multiple LLMs via REST/GraphQL APIs, enhancing intelligent workflow automation capabilities for client implementations.

Education

Bachelor of Science in Computer Science
University of Padua *Padua, Italy*
