Professional Summary

Results-oriented Backend Software Engineer specializing in Java, Spring Boot, and AI integrations. Proven ability to design and build scalable, secure backend systems and microservices for complex domains. Experienced with Docker, Kubernetes, and leveraging Data & Analytics to drive intelligent software solutions. Strong track record of taking end-to-end ownership of the software lifecycle in collaborative enterprise environments.

Technical Skills

- **Languages:** Java, Python, SQL, JavaScript
- **Frameworks & Libraries:** Spring Boot, Hibernate, RESTful APIs
- **Cloud & DevOps:** Docker, Kubernetes, AWS (EC2, ECS, S3), CI/CD, Git
- **Data & AI:** AI Tooling integrations, Data Analytics, Relational Databases (PostgreSQL, MySQL)

Professional Experience

Senior Backend & AI Engineer *Remote / Italy*
Freelance / Independent 2020 – Present

- Designed and maintained scalable backend architectures using Java and Spring Boot for high-availability systems.
- Containerized applications and managed microservices deployment using Docker and Kubernetes, ensuring high scalability and resilience.
- Integrated AI and Data Analytics capabilities into backend services, improving intelligent data processing and decision-making features.
- Collaborated with cross-functional teams to deliver secure, end-to-end features optimized for enterprise environments.

Education

Bachelor of Science in Computer Science *Graduation Year*
University Name, City, Country
