## Summary

Gen AI Engineer who designs, builds, and ships production-grade LLM agents and generative-AI pipelines. I write real code – Python, TypeScript, Next.js, Laravel – and wire foundational models (Claude, OpenAI), RAG architectures, and enterprise APIs end to end. At FlowSpace I engineered autonomous AI agents with human-in-the-loop review, automated complex data ingestion workflows, and integrated enterprise booking and CRM systems across a live marketplace.

## Selected Projects

- **AI Listing Bot (FlowSpace):** human-in-the-loop tool that ingests a brochure in any format (PDF, website, image, or spreadsheet), drafts a full listing with an LLM, and pushes it to the backend after review. Owned end to end. Stack: n8n, Claude, TypeScript.
- **Platform migration to Next.js + Laravel (FlowSpace):** led the move from a legacy stack to a coded Next.js and Laravel stack. Mapped the data model, chose the migration path per entity (API endpoints or CSV export), and drove the cutover. Scaled from 2,000 to 4,500+ users.
- **CRM & GTM automation (FlowSpace):** built a CRM-to-platform integration for automated lead capture, enrichment, routing, and outbound.
- **Booking API integrations (FlowSpace):** integrated the OfficeRnD and Nexudus APIs for automated bookings.
- **CV parsing tool (UltraStrategy):** LLM data extraction with n8n and Eden AI across multiple user profiles.
