Summary

AI Engineer who builds intelligent autonomous agents, robust RAG pipelines, and automated enterprise workflows in production. I write real code – Python, TypeScript, Next.js, Laravel – and wire foundational models, external APIs, and data pipelines end to end. Certified across the Microsoft AI ecosystem (Copilot Studio, Power Automate) and experienced deploying autonomous support agents, custom copilots, and human-in-the-loop document processing systems with measurable operational impact for Nadara.

Selected Projects

- **AI Document Processing Pipeline (FlowSpace):** multi-step human-in-the-loop AI tool that ingests unstructured assets (PDF brochures, websites, spreadsheets), extracts and validates data with LLMs, and pushes structured listings to production. Owned end to end. Stack: n8n, Claude, TypeScript, Python.
- **Autonomous Support & Query Agents (FlowSpace):** deployed AI agents that resolve customer queries directly against live database and platform contexts, with confidence-based escalation to human operators.
- **Platform Migration to Next.js + Laravel (FlowSpace):** led the full architectural migration from a legacy stack to a modern coded Next.js and Laravel backend, designing data models and endpoints that feed AI workflows. Scaled from 2,000 to 4,500+ users.
- **Enterprise CRM & Operational Automations (FlowSpace):** built an automated pipeline connecting platform APIs, CRM, and outbound messaging for lead enrichment, intelligent routing, and synchronized operations.
- **AI CV Parsing Engine (UltraStrategy):** production LLM data extraction tool using n8n and Eden AI, structuring complex multi-page PDF documents into unified schemas across diverse user profiles.
