Summary

Artificial Intelligence Engineer who builds and deploys LLM agents, retrieval pipelines, and full-stack integrations into production products. Proficient in Python and TypeScript, bridging foundational generative models with enterprise APIs, workflow automation, and automated data pipelines. At FlowSpace, led the core platform migration to a scalable Next.js and Laravel stack, scaling to 4,500+ users while engineering human-in-the-loop AI agents, automated document ingestion, and live customer-facing support systems.

Selected Projects

- **AI Listing Bot & Ingestion Pipeline (FlowSpace):** human-in-the-loop platform tool that ingests unstructured brochures (PDF, website, image, spreadsheet), extracts key entities, drafts structured listings with Claude API, and publishes to the backend after review. Built with n8n, Claude, and TypeScript; 900+ listings drafted.
- **Platform Migration to Next.js + Laravel (FlowSpace):** led the migration of a live marketplace from a legacy stack to a modern coded architecture. Mapped data models, managed entity cutovers via APIs and automated scripts, and scaled from 2,000 to 4,500+ active users.
- **Automated Support Agents (FlowSpace):** built conversational AI agents that triage and answer user queries against live platform records, with confidence-based escalation to human operators.
- **CRM & GTM Automation (FlowSpace):** engineered automated pipelines connecting CRM and internal platform APIs for automated lead capture, enrichment, routing, and outbound messaging.
- **Booking API Integrations (FlowSpace):** integrated OfficeRnD and Nexudus APIs for bidirectional, automated booking synchronization and webhook management.
- **LLM Document Extraction Tool (UltraStrategy):** built automated parsing pipelines using n8n and Eden AI for multi-profile data extraction and structured synthesis.
