Motivation letter for Application for Full Stack Developer – CT Office Incubation Team – Milan, Italy

Dear Hiring Manager,

I am writing to express my strong interest in the Full Stack Developer position within AVEVA's Chief Technology Office Incubation Team in Milan. AVEVA's track record in powering the world's leading industrial operations and its deliberate approach to maturing emerging capabilities – including Industrial AI, Digital Twins, robotics, simulation, and edge-to-cloud architectures – into tangible software strongly aligns with my experience. As an early-career developer with three years of practical coding experience turning experimental concepts into testable, customer-validated prototypes across the stack, I am eager to contribute to your incubation mission.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.js and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow aligns directly with the requirements of the Incubation Team. I develop end-to-end prototype solutions spanning responsive frontends in Next.js/React, well-documented REST APIs, data integrations with PostgreSQL and Supabase, and containerized deployments with Docker. I am comfortable working in small, fast-moving teams to produce minimum-viable implementations, write automated tests (having authored a suite of 278 automated tests for a production crawler), and troubleshoot applications using logs to ensure demo readiness. Having collaborated with cross-functional teammates across eight European companies, I communicate clearly in English, ask constructive questions in ambiguous problem spaces, and maintain clear documentation for setup steps and API contracts to facilitate reuse.

I extensively leverage AI coding assistants like Claude Code and Cursor alongside low-code platforms and modern frameworks (TypeScript, Next.js, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. Crucially, I treat AI-generated code responsibly, applying disciplined validation for correctness, edge-case handling, and security hygiene following team standards. Furthermore, I have hands-on exposure to edge and cloud deployments, including self-hosted Linux VPS environments (GCP, Oracle Cloud) with containerized services, Caddy reverse proxies, and edge network routing. I am also eager to continue learning new systems and tech stacks; I recently completed certifications in Microsoft Copilot Studio and AI agent orchestration, and I am excited to expand my knowledge into Digital Twins, simulation, and industrial software topics.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship in Italy or anywhere in the EU, and have the professional English proficiency required for international collaboration. I am fully available for the 50% on-site hybrid arrangement at AVEVA's Milan office, as well as short and medium-term business travel for workshops, demos, and prototype validation.

I would welcome the opportunity to discuss how my practical background in rapid full-stack prototyping, API integration, and disciplined AI-assisted engineering can immediately contribute to the CT Office Incubation Team.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
