Dear Dataminr Hiring Team,

I am writing to apply for the Forward Deployed Engineer position for the Brussels region. With my background in architecting AI-powered data pipelines and leading customer-facing deployments, I am highly interested in helping Dataminr operationalize real-time intelligence platforms like First Alert within complex customer environments.

In my current role as a Lead AI Developer at FlowSpace, I act as a trusted technical advisor, building and deploying robust solutions that directly solve operational bottlenecks. Here is how my experience maps to Dataminr's needs:

- **Real-Time Data & APIs:** I engineered complex REST and GraphQL API integrations and data pipelines in Python and TypeScript, scaling platforms to support thousands of active users with human-in-the-loop validation.
- **Customer-Facing Deployment:** I managed the end-to-end deployment of an AI-native platform for Urlink, translating client requirements into actionable architectural solutions and delivering the product ahead of schedule.
- **Cross-Functional Collaboration:** I routinely channel customer feedback back into product design, acting as the bridge between client operations and core engineering teams to optimize deployed models.

Dataminr's mission to provide real-time alerts for critical events strongly resonates with my passion for building impactful, highly reliable software. I thrive in environments where I can leverage my technical stack—Python, SQL, and cloud infrastructure—to deliver immediate value to customers, including those in defense and national security sectors.

I would welcome the opportunity to discuss how my technical expertise and focus on customer success align with the Forward Deployed Engineer role. Thank you for your time and consideration.

Kind regards,

Prabhavit Gupta
