Subject: Application for Junior Python Developer (Digital Solutions and Technology)

Dear Jacob Breiting Sönnichsen and the Minerva Imaging Hiring Team,

I am writing to express my strong interest in the Junior Python Developer position within the Digital Solutions and Technology department at Minerva Imaging. Having followed Minerva Imaging's growth as a specialized CRO and CDMO in targeted radionuclide therapies and molecular imaging, I am inspired by your scientific mission to advance preclinical oncology and cardiovascular research. I am eager to apply my experience in Python development, automated data capture pipelines, and structured AI-assisted workflows to help develop and maintain your core internal applications.

Over the past three years, I have worked across European tech teams developing software solutions that translate real operational needs into reliable software. At FlowSpace, I engineered an automated data pipeline that extracts and structures data from varied, heterogeneous sources (PDF documents, spreadsheets, and external platforms) and ingests it into normalized PostgreSQL schemas. To safeguard data integrity, I developed a bounded crawler and parsing engine backed by 278 automated test suites, emphasizing error handling and resilience. My daily engineering involves Python scripting, RESTful API integrations, relational databases, Git version control, and collaborative code reviews. While my web framework experience centers around MVC architectures like Laravel and full-stack TypeScript, the underlying patterns of object-oriented design, routing, ORMs, and database migrations enable me to ramp up quickly on Django under the guidance of your senior colleagues.

Minerva's focus on utilizing AI-assisted development tools in a structured, secure, and compliant manner directly matches my day-to-day practices. I use tools such as Claude Code not as informal shortcuts, but within defined harnesses that incorporate human-in-the-loop review, automated tests, and strict boundary conditions. In my recent pipeline work, every automated extraction is logged and diffed against human edits within PostgreSQL, creating an auditable, traceable record while preventing data leakage. In a regulated research environment where traceability and data fidelity are paramount, this disciplined approach ensures that developer tooling enhances productivity without compromising compliance.

I thrive in collaborative, informal environments where people communicate openly, support one another, and ask thoughtful questions when facing unfamiliar challenges. As an EU Long-Term Residence Permit holder, I have full legal authorization to work in Denmark without visa sponsorship, and I am prepared to relocate to the Ølstykke / Copenhagen area for on-site collaboration and interviews. Furthermore, I am eager to begin learning Danish to integrate seamlessly with local colleagues and research teams.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my technical foundation, curiosity, and practical problem-solving approach can contribute to Minerva Imaging's digital solutions team.

Sincerely,

Prabhavit Gupta
