Engineering Hiring Team
OANDA Poland sp. z o.o.
Zabłocie, Cracow, Poland

Subject: Application for Associate Software Engineer (React.js, Python) – Cracow, Poland

Dear Hiring Manager,

I am writing to apply for the Associate Software Engineer (React.js, Python) role at OANDA in Cracow. As an innovator since 1996, when OANDA became the first company to make comprehensive currency exchange rate information freely accessible on the internet, your organization has consistently defined standards in online trading and financial technology. Your Cracow Scrum team's focus on building high-performance client registration and seamless onboarding platforms using React.js, FastAPI, and Domain-Driven Design (DDD) on Google Cloud Platform aligns closely with my professional background in full-stack web development, API orchestration, and AI-accelerated workflows.

Over the past three years, I have transformed abstract business and product requirements into production-ready software across multiple European tech projects spanning the UK, Luxembourg, France, Germany, and Spain. Operating as a full-stack and automation developer, my focus has been on writing clean, testable, and reusable code across modern TypeScript/JavaScript and Python ecosystems.

During my work at FlowSpace (London), I spearheaded the migration of client-facing product workflows from legacy architecture into a modular React.js and Next.js frontend, while developing Python backend services and FastAPI endpoints for automated booking integrations with external systems like Office RnD and Nexudus. Adhering to Domain-Driven Design principles, I separated core onboarding and workspace reservation domains from third-party API adapters, establishing clean boundaries and reusable modules. These technical improvements directly contributed to scaling the active user base from 2,000 to over 4,500 active users by removing registration bottlenecks and elevating application reliability.

Your job description explicitly highlights leveraging AI tools to accelerate development and automate processes, which is central to my daily workflow. I routinely use AI coding assistants such as Claude Code to rapidly scaffold components, iterate on complex problem solving, automate regression test generation, and refactor code while adhering strictly to SOLID and Clean Code standards. In addition, I have built and maintained automated regression suites using Playwright, executed systematic unit and manual testing, and regularly analyzed server logs and HTTP traces to troubleshoot integration anomalies and keep test framework code maintainable.

As a graduate of Ca' Foscari University holding a European Long-Term Residence Permit, I have full legal authorization to work in Poland without any visa sponsorship. I am fully prepared and enthusiastic to relocate to Cracow for the hybrid model in Zabłocie. I work comfortably in international, English-speaking Agile teams and bring a proactive communication style and dedication to continuous improvement.

I would welcome the opportunity to discuss how my hands-on background in React.js, Python (FastAPI), and AI-driven development can contribute immediately to OANDA's registration and

onboarding platforms.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
