Prabhavit Gupta

Venice, Italy | +39 351 610 7807 | prabhavitg@gmail.com | linkedin.com/in/prabhavit

Professional Summary

AI Solutions and Forward-Deployed Engineer with hands-on experience designing, debugging, and deploying production LLM systems, autonomous agent workflows, and mission-critical API integrations across European tech organizations. Proven consultative delivery leader who bridges enterprise architecture and practical code execution to eliminate technical blockers, accelerate customer time-to-value, and scale platform usage from 2,000 to over 4,500 active users. European Long-Term Residence Permit holder with full EU work authorization (no sponsorship required) and readiness to relocate to Madrid or travel across EMEA for customer engagements.

Technical Skills & Core Competencies

- **Cloud & Applied AI:** Google Cloud Platform (GCP), Vertex AI / Foundation Model APIs, LLM Orchestration, RAG Architectures, Autonomous AI Agents, Prompt Chaining & Evaluation, Human-in-the-Loop Feedback Loops, Model Routing, Confidence Scoring.
- **Systems Design & Programming:** System Architecture, RESTful API Design & Integration, Webhooks, Python, TypeScript, Next.js, Laravel (PHP), MySQL, PostgreSQL (Supabase, Neon), Linux (systemd, SSH bastion tunneling, WAF/firewalls, Caddy).
- **Integration & Workflow Automation:** n8n, Tray.ai, Microsoft Power Automate, Microsoft Copilot Studio, GitHub Actions CI/CD, Cron Pipelines, Web Scraping & Bounded Crawlers.
- **Technical Delivery & Methodology:** Forward Deployed Engineering, Consultative Delivery, Deployment Roadmaps, Blocker Resolution & Root-Cause Analysis, Cross-Functional Team Leadership, QA & Unit Testing (Playwright, 278 automated test suites).
- **Languages & Authorization:** English (Professional / C2), Hindi (Native), Italian (Beginner); European Long-Term Residence Permit (Full work authorization across Spain and EU; no visa sponsorship required).

Professional Experience

FlowSpace.co — London, UK (Remote)
Lead Developer (Full-time, Freelance) — Mar 2024 – Ongoing

- **Technical Leadership & Consultative Delivery:**
  - Directed platform technical evolution and adoption, scaling the active user base from 2,000 to 4,500+ through iterative engineering, stakeholder alignment, and systems optimization.
  - Spearheaded enterprise onboarding across 20+ commercial real estate operators (including WeWork UK&I, Sub800 London/NYC, and RX London), ingesting and drafting over 1,000 individual office listings from unstructured operator packages.
  - Acted as the core technical liaison between internal product teams, executive stakeholders, and external development partners, establishing API specifications and deployment roadmaps.
  - Architected automated CRM integrations and outbound GTM pipelines, consolidating lead capture mechanisms and accelerating customer pipeline progression.
- **Production AI & Systems Engineering:**
  - Designed and deployed an end-to-end AI listing ingestion platform (Next.js on Vercel) converting messy broker emails (.eml), PDFs, spreadsheets, and operator sites into structured catalog entries.
  - Engineered a bounded web crawler with magic-byte file classification, boilerplate detection, and 278 automated tests to guarantee resilient data extraction.
  - Built a human-in-the-loop correction feedback loop, capturing diffs in PostgreSQL (Neon) to continuously refine prompt chains and extraction accuracy.
  - Deployed autonomous agent pipelines on GitHub Actions with confidence-tiered routing: auto-publishing high-confidence drafts while escalating edge cases for human review.
  - Led the architectural migration of legacy Bubble.io infrastructure to a modern Next.js and Laravel (MySQL) backend with relational resource chains and REST APIs.
  - Integrated third-party management APIs (OfficeRnD, Nexudus) for automated booking synchronization and multi-location inventory mapping.
  - Diagnosed and resolved high-impact production incidents, mitigating crawler-bot attacks via edge WAF filtering and configuring secure SSH-tunneled bastion hosts for database operations.

Urlink — Barcelona, Spain (Remote)
Project Manager and AI-Assisted Developer (Freelance) — Apr 2025 – Jul 2025

- Interfaced directly with client stakeholders to analyze business requirements, formulate technical specifications, and deliver customer-facing web applications.
- Leveraged AI-native development workflows (Claude Code, bolt.new, Supabase) to rapidly prototype and deploy production features.
- Implemented automated client workflows and built scalable UI components with responsive state management.

UltraStrategy.com France (Remote)
AI & Automation Developer (Collaborator) Dec 2024 – May 2025

- Engineered an automated CV-parsing and candidate evaluation pipeline using n8n and Eden AI API orchestration.
- Architected structured data extraction schemas and user profiles, significantly reducing manual candidate screening time.
- Integrated multi-model AI endpoints to handle diverse document formats and unstructured inputs.

Get2Germany.com Berlin, Germany (Remote)
Lead Developer & Automation Specialist (Part-time) Jan 2024 – May 2024

- Integrated Google APIs to monitor platform performance, track user engagement metrics, and optimize conversion funnels.
- Engineered AI-driven matching pipelines to automate course, internship, and job recommendations for international applicants.
- Performed database optimizations and translated Figma architectural designs into responsive production workflows.

Clubee.com Foetz, Luxembourg (Remote)
Low-Code Developer & Quality Assurance (Full-time, Freelance) Sep 2023 – Aug 2024

- Implemented full frontend API integrations with Clubee's core REST backend, ensuring data integrity across complex federation dashboards and shops.
- Built custom domain integration modules and multi-tenant tooling for sports organizations.
- Authored automated unit tests and conducted regression QA to guarantee stability across multi-environment deployments.

Tractionboard.co Utrecht, Netherlands (Remote)
Low-Code Developer Intern Aug 2023 – Oct 2023

- Integrated ChatGPT/OpenAI APIs to deliver automated content generation and user assistance features.
- Configured SendGrid email delivery pipelines and implemented responsive frontend interfaces.

Education

Ca' Foscari University of Venice Venice, Italy
Bachelor's in Philosophy, International Studies & Economics (Minor in Entrepreneurship) Oct 2020 – Jun 2024

Certifications

- Microsoft Copilot Studio Agent Academy
- Microsoft – Introduction to Building AI Agents
- Microsoft Power Automate
- Tray.ai Build Practitioner (Sep 2024) & Build Foundations

Motivation letter for Application for AI Outcome Customer Engineer, Forward Deployed Engineering – Madrid, Spain

Dear Hiring Manager,

I am writing to express my interest in the AI Outcome Customer Engineer position within Forward Deployed Engineering at Google Cloud in Madrid. Having architected and operated production AI pipelines across dynamic European technology environments, I have closely followed Google Cloud's leadership in enterprise AI adoption across Vertex AI, Gemini foundational models, and agentic solution architectures. The AI Outcome Customer Engineer mandate – embedding directly with strategic customers to bridge enterprise architecture, resolve deep technical blockers, and accelerate customer adoption into measurable business value – aligns precisely with my practical background in LLM orchestration, rapid prototyping, and complex API integration.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My engineering and delivery workflow maps directly onto the core responsibilities of this role: I design and execute structured deployment pipelines, clear critical integration blockers across APIs and cloud infrastructure, and build robust harnesses connecting foundational models with operational enterprise systems. At FlowSpace, I architected a production listing ingestion engine that processed complex, unstructured inputs across 20+ enterprise operators (including WeWork UK&I and Sub800) and drafted over 1,000 individual offices, incorporating an automated human-in-the-loop correction flywheel in PostgreSQL to ensure precision. Whether debugging system integrations, onboarding technical implementation partners, or translating technical roadmaps into executive business outcomes, I prioritize practical, resilient execution and rapid customer time-to-value.

I extensively leverage AI coding assistants like Claude Code alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase, Python) to rapidly test hypotheses and deploy MVP architectures. Recently, I oversaw a complex architectural migration from a low-code infrastructure to a robust Next.JS and Laravel stack, ensuring that our rapid prototypes evolved successfully into highly scalable, reliable, and secure enterprise products.

I am also open to learning new systems and tech stacks; I recently completed certifications in Microsoft Copilot Studio and AI agent orchestration, and maintain active familiarity with cloud consoles including GCP.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship across the EU (including Spain), and have the professional English proficiency required for international collaboration. I am fully available to relocate to Madrid and readily available for short- and medium-term business travel as project demands.

I would welcome the opportunity to discuss how my practical background in orchestrating AI capabilities, debugging complex systems, and driving customer adoption can immediately contribute to Google Cloud's Forward Deployed Engineering team.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018, for the purposes of recruitment and selection.
