Hiring Team
Revstar Consulting
Application for Forward Deployed Engineer (AWS)

Dear Hiring Team at Revstar,

As a Forward Deployed Engineer and Cloud Solutions Architect operating at the intersection of enterprise cloud architecture, hands-on engineering, and client-facing delivery, I am thrilled to apply for the Forward Deployed Engineer (AWS) position at Revstar. Revstar's mission as an Advanced AWS Consulting Partner—modernizing legacy infrastructure, architecting resilient cloud-native platforms, and deploying production-grade Generative AI on AWS—directly reflects my background. Over the past three years, I have partnered directly with client stakeholders (CTOs, product leaders, engineering teams) to translate complex business objectives into scalable AWS architectures and accelerate time-to-value.

Leading platform architecture and client delivery at FlowSpace.co alongside forward-deployed engagements across European tech ventures, I have demonstrated the technical rigor and client leadership essential to Revstar's AWS Practice:

- **Enterprise AWS Architecture & Cloud Migration:** Led the end-to-end cloud migration and application modernization of FlowSpace from a legacy monolithic stack to a high-performing Next.js and Laravel backend, scaling active platform users from 2,000 to over 4,500 with zero downtime. Architected event-driven microservices leveraging AWS S3, Lambda, and relational databases, establishing Infrastructure as Code practices (Terraform, AWS CDK) and CI/CD pipelines aligned with the AWS Well-Architected Framework.
- **Production AWS GenAI & RAG Implementations:** Architected and deployed an enterprise multi-modal listing automation pipeline (Python, TypeScript, Bedrock/Claude APIs) ingesting unstructured brochures (PDFs, web, spreadsheets) with human-in-the-loop validation, drafting 900+ production listings. Engineered scalable ingestion frameworks integrating vector search (pgvector, OpenSearch) to unlock enterprise data assets and drive AI-powered automation.
- **Forward-Deployed Client Delivery & Executive Leadership:** Served as primary technical lead on client engagements (FlowSpace, Urlink, UltraStrategy), conducting technical discovery, building working POCs, and aligning technical milestones with executive business ROI. Engineered bidirectional REST API integrations (OfficeRnD, Nexudus, enterprise CRMs) with robust error recovery, driving platform adoption and operational efficiency.

What excites me most about Revstar is your emphasis on being both a master cloud builder and a trusted technical advisor. Deploying successful cloud and AI solutions requires not just deep technical proficiency, but a genuine understanding of customer business drivers and the ability to expand client workload adoption. Having engineered distributed cloud systems, complex API workflows, and production RAG pipelines, I am eager to help Revstar's enterprise clients achieve seamless migrations and scalable AWS GenAI rollouts.

I hold an Italian EU Long Term Residence Permit (unrestricted EU work rights, no visa sponsorship required) and am fully prepared to deliver in Revstar's remote-first, client-embedded environment. I welcome the opportunity to discuss how my hands-on AWS engineering, rapid POC velocity, and client consulting experience will deliver immediate impact for Revstar and your enterprise clients.

Sincerely,

Prabhavit Gupta
