Motivation letter for Application for AI/ML Engineer, Senior – Booz Allen Hamilton

Dear Hiring Manager,

I am writing to express my interest in the Senior AI/ML Engineer position at Booz Allen Hamilton. As an Applied AI Engineer with a strong focus on deploying operational LLM solutions, I have been closely following Booz Allen Hamilton's commitment to modernizing mission systems and delivering secure, high-impact capabilities. Your focus on building robust machine learning pipelines and integrating generative AI into real-world operational environments aligns perfectly with my expertise in LLM orchestration, data pipeline engineering, and AI-enabled API integrations.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple technology projects; from a dynamic AI processing platform in London to automation systems for strategic consulting platforms in Germany and France.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to a Next.js and Laravel stack. I engineered AI agents and automated data extraction pipelines—utilizing Anthropic's Claude and OpenAI—that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the core requirements outlined in your role: I utilize prompt chaining, RAG architectures, and advanced orchestration tools to connect external services with foundational models. I thrive in bridging complex operational workflows with practical AI capabilities, prioritizing secure implementations, robust evaluations, and tangible mission value over rigid adherence to legacy frameworks.

I extensively leverage AI coding assistants like Claude Code alongside modern infrastructure (Python, TypeScript, Node.js, Next.js) to rapidly test hypotheses and deploy secure MVP architectures. Recently, I oversaw a complex architectural migration, ensuring that our rapid prototypes evolved successfully into highly scalable, reliable, and observable products.

I am also open to learning new techstacks and operational systems. I recently completed certifications in Microsoft Copilot and AI agent orchestration. As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit, and have the professional English proficiency required for international collaboration. I am open to relocation and fully available for business travel as project demands.

I would welcome the opportunity to discuss how my practical background in orchestrating

AI models and automating complex data pipelines can immediately contribute to your expert engineering teams.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018, for the purposes of recruitment and selection.
