Hiring Manager
Customer Engineering Solutions Team
Domino Data Lab

Dear Hiring Manager,

I am writing to express my strong interest in the Forward Deployed Engineer position at Domino Data Lab. With an extensive background as an AI Solutions and Automation Engineer, I specialize in building generative AI workflows and intelligent agents, and deploying them rapidly to solve real-world operational bottlenecks. Domino's mission to accelerate mission-critical AI use cases in complex, regulated environments directly aligns with my passion for bridging raw technical solutions with direct customer impact.

In my recent role as Lead Developer for FlowSpace, I architected and deployed our flagship AI automation tool: a multi-format listing bot that digests raw customer inputs (PDFs, images, websites) into structured platform data through a human-in-the-loop review pipeline. By combining Python, advanced prompting strategies, and robust backend integrations, I transformed a manual data-entry bottleneck into an automated, highly scalable workflow. Beyond building AI capabilities, I led our migration from a legacy no-code stack to a Next.js and Laravel architecture, directly scaling the platform to over 4,500 users.

I thrive in the intersection of engineering and client consultation. Across my freelance engagements with European startups such as Urlink and UltraStrategy, I have consistently acted as a technical advisor—running discovery sessions, translating messy requirements into actionable engineering specs, and rapidly embedding within unfamiliar codebases to ship production-ready features. Whether integrating complex APIs or orchestrating cloud deployments, I bring an "act fast, own it" mentality to every project.

Domino's focus on deploying scalable and governed AI solutions is precisely where I want to make my next impact. I am highly comfortable with Python and SQL, and I am excited to bring my experience in shipping AI agent frameworks to your Customer Engineering Solutions Team to help your clients realize the full value of the Domino platform.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my engineering background and consultative approach can drive success for Domino Data Lab and its enterprise customers.

Sincerely,

Prabhavit Gupta
