Subject: Application for Software Engineer, Machine Learning

Dear Hiring Manager,

I am writing to apply for the Software Engineer, Machine Learning position at Ema. I have closely followed Ema's vision of building the "Universal AI Employee" to automate complex enterprise workflows, and I am excited by the opportunity to contribute to your Agentic AI platform.

In my role as Lead Developer at FlowSpace.co, I spearheaded the end-to-end development of AI agents in a production environment. I designed and deployed an AI listing bot using TypeScript, n8n, and Claude that ingests multi-format unstructured data (PDFs, images) to autonomously draft listings with human-in-the-loop review. Furthermore, I built support AI agents backed by RAG and confidence-based escalation mechanisms to interact with live platform data. These projects mirror the core engineering challenges at Ema—transforming foundational LLM capabilities into reliable, robust automation tools for real-world enterprise tasks.

While I do not possess a traditional CS degree, my track record of scaling a platform from 2,000 to over 4,500 users and delivering applied machine learning pipelines (such as a CV-parsing extraction engine for UltraStrategy) highlights my ability to tackle practical ML implementation challenges. I am proficient in Python and TypeScript, modern data infrastructures, and am highly adept at working with prompt engineering, retrieval strategies, and orchestrating complex agentic systems.

Ema's focus on autonomous agents and NLP aligns perfectly with my hands-on background in shipping production AI products. I would welcome the opportunity to bring my applied engineering experience to your team.

Thank you for your time and consideration. I have attached my resume for your review and look forward to discussing how my background can support Ema's growth.

Sincerely,

Prabhavit Gupta
