HappyRobot Hiring Team
HappyRobot

Subject: Application for Founding Forward Deployed Engineer

Dear HappyRobot Hiring Team,

As an AI Solutions Engineer who has built and deployed autonomous AI workflows and full-stack platforms from scratch, I was thrilled to see the Founding Forward Deployed Engineer position at HappyRobot. Your mission to build autonomous AI workforces for enterprises strongly resonates with my experience bridging the gap between complex AI capabilities and tangible business outcomes.

Over the past year at FlowSpace, I led the migration of a legacy system to a coded Next.js and Laravel stack, successfully scaling the platform to over 4,500 users. Beyond full-stack development, I have taken extreme ownership of our AI features. I designed, built, and shipped an autonomous AI Listing Bot using TypeScript, Claude, and n8n that drafts enterprise listings from varied unstructured sources and integrates seamlessly into our backend.

My background maps directly to the hybrid nature of the Forward Deployed Engineer role:

- **AI Workflow Deployment:** Built human-in-the-loop enterprise AI tools and data extraction pipelines (UltraStrategy, Get2Germany) that interact with diverse user profiles and integrate seamlessly into production environments.
- **Full-Stack Engineering:** Proficient in TypeScript, Next.js, Node.js, and Python, allowing me to customize AI workers and embed them directly into existing client infrastructure.
- **Customer-Centric Execution:** Experienced in triaging and resolving customer issues end-to-end, translating operational bottlenecks into scalable, production-ready AI systems.
- **Founder's Mindset:** As a freelance lead developer across multiple early-stage startups, I operate with high independence, adapting quickly to new technologies and driving adoption.

While my current primary languages are English, Italian, and Hindi, I am a fast learner who thrives in fast-paced, highly autonomous environments. I am excited by the prospect of working directly with HappyRobot's enterprise clients, driving the adoption of your AI infrastructure, and ensuring it delivers measurable operational success.

Thank you for considering my application. I would welcome the opportunity to discuss how my technical expertise and extreme ownership can contribute to HappyRobot's growth.

Kind regards,
