Hiring Manager
Integer Consulting
Lisbon, Portugal

Dear Hiring Team at Integer Consulting,

I am writing to express my enthusiasm for the Senior AI/ML Engineer role at Integer Consulting. With deep hands-on expertise in Agentic AI solutions, Large Language Models (LLMs), and scalable data pipelines, I am excited by the prospect of designing and operationalizing complex AI systems within your technology environments. I am currently based in Venice, Italy, but I am fully prepared and open to relocating to Lisbon for the 3-day hybrid work model.

In my recent role as Lead AI Solutions Engineer at FlowSpace, I spearheaded the design, development, and continuous lifecycle management of our AI pipelines. I built an end-to-end Agentic AI system that ingests multimodal data and autonomously drafts property listings, integrating human-in-the-loop review for ongoing model optimization. This required rigorous operational practices akin to MLOps, ensuring that our LLMs performed consistently across complex environments while automating CI/CD workflows for our deployments.

Furthermore, I bring significant experience acting as the technical bridge between product engineering and AI model lifecycle orchestration. I led a critical platform migration from a legacy system to a robust Next.js and Laravel architecture, scaling our user base from 2,000 to over 4,500 users in a fast-paced, Agile environment. This background ensures that I do not just train models in isolation; I integrate them securely and efficiently into large-scale, production-ready digital platforms.

Integer Consultings commitment to providing tailor-made AI solutions and IT outsourcing aligns perfectly with my track record of rapid iteration and cross-functional delivery. I am highly comfortable developing and fine-tuning LLMs, maintaining observability pipelines, and collaborating closely with engineering, data, and product teams.

Thank you for considering my application. I look forward to discussing how my technical expertise in Generative AI and scalable platform engineering can drive value for Integer Consulting and its clients.

Sincerely,

Prabhavit Gupta
