To the Hiring Team at Jobbol / Abler

Subject: Application for Engenheiro de Inteligência Artificial

Dear Abler Team,

With a deep background in orchestrating AI agents and a proven track record in building HR-specific AI solutions, I am excited to apply for the Artificial Intelligence Engineer position at Jobbol. Abler's mission to bring technological control and predictability to recruitment aligns perfectly with the systems I build.

In my recent work, I have focused heavily on the core capabilities you are seeking: autonomous agent orchestration, RAG pipelines, and Human-in-the-Loop workflows.

Here is how my experience maps to your requirements:

- **HR & Recruitment AI Experience:** At UltraStrategy, I built an LLM-powered CV-parsing engine to automate candidate data extraction. At Get2Germany, I developed AI automation pipelines to match candidates with jobs and internships.
- **Autonomous Agents & Human-in-the-Loop (HITL):** For FlowSpace, I designed and shipped an AI listing bot from scratch. It ingests multi-modal brochure data (PDFs, websites, images), drafts accurate listing profiles, and routes them through a HITL dashboard for final approval before pushing to our production database.
- **Tool Orchestration & Memory:** I specialize in creating agents that connect to external APIs and internal vector databases, maintaining conversational memory to resolve complex user queries reliably. I have worked extensively with Claude, OpenAI APIs, and tools analogous to MCP Servers to manage complex integrations.

I am eager to bring my expertise in agent lifecycle management and RAG infrastructure to Abler. I would welcome the opportunity to discuss how we can build robust, scalable AI recruitment tools together.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
